

Documentation

- This is a modular package, use the pivots and the snap tool for better workflow (V Key). Check this out if you are experiencing any difficulty - <https://www.youtube.com/watch?v=Z8pe7XL6Lcg&feature=youtu.be>
- I used some post processing effects on my main camera, so if you get errors just download them (Window - Package Manager - Post Processing - Install).
- If you need a particular asset that you think fits into this pack, you can request me in pedromachadogamedev@gmail.com.
When I analyze and when I have time I add it to the pack.
